About The Codes

Using the Entity Codes

The Unicode numeric entity codes can be expressed as either decimal numbers or hexadecimal numbers.

For instance, the **decimal** version of Greek lowercase omega tonos (ώ) would be [ώ](#)

The **hexadecimal** version of Greek lowercase omega tonos (ώ) would be [ώ](#)

Note that the hexadecimal numbers include **x** as part of the code.

Combining Characters

When codes for combining characters are inputted, they are placed on the previous letter.
